## **DETAILED ACTION**

### ***Response to Arguments***

Applicant's arguments with respect to claims 1-15 have been considered but are moot in view of the new ground(s) of rejection.

### ***Allowable Subject Matter***

The indicated allowability of claim 11 is withdrawn in view of 35 U.S.C. 112, second paragraph, as being incomplete.

### ***Claim Objections***

Claims 2,3 and 13 are objected to because of the following informalities: applicant is inconsistent with the claimed limitation "variable voltage amount" by referring to the limitation as "amount. Appropriate correction is required.

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 5-11 rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

After careful review of claims 5-10, it is not clear within the claim language as to purpose of the interconnection of the comparator with the timing control logic and the capacitor because as portrayed by the claim language these elements form a loop within each other and are not interconnected with operation of the generators or controllers.

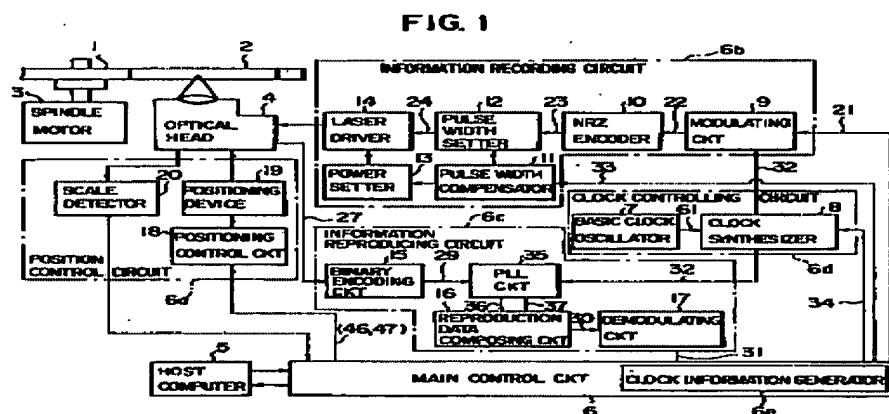

Regarding claim 11, it is not within the claim language as to what the comparators are comparing because as portrayed by the claim language each comparator as an open input.

## Claim Rejections - 35 USC § 102

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-15 are rejected under 35 U.S.C. 102(b) as being anticipated by Shimizu et al (PN 5,24,103).

Figure 1 illustrates a disk recording apparatus having a recording medium (2), an optical head (4), a pulse width setter (12) and a laser driver. Column 7 lines 29-50 discloses the pulse width setter including a delay element which provide timing of the pulse, the laser driver providing switching which will induce pulses in the semiconductor laser and the power setter including a D/A for providing analog potential for the semiconductor laser.
